

SAQIB JABBAR

Growth & Operations Manager | SaaS Analytics, Automation, and Customer Success

Islamabad, Pakistan | +92 (346) 817-3203 | 132saqib@gmail.com | saqibjabbar.com

PROFESSIONAL SUMMARY

Growth and operations professional with **5+ years** in SaaS, most of it spent at JaldiTech, a UAE-based CRM startup, where I've worn a lot of hats: analytics, automation, sales, and customer support. I built the company's analytics stack from scratch, launched the Pakistan sales market, and put together an AI-powered outbound prospecting system using **n8n**, **Apify**, and **OpenAI**. Along the way I've hired and managed both sales and support teams, and worked closely with the CEO on the reporting that shaped company direction, contributing to JaldiTech growing **MRR** by **48%** in 2025. I'm about as comfortable writing **SQL** or building out a **Zapier** workflow as I am running an ad campaign or coaching a sales rep.

EXPERIENCE

Growth & Operations Manager

April 2025 to Present

JaldiTech, UAE-based CRM startup (Remote)

- Took the Pakistan market from zero to a working sales operation, hiring and managing a team of **3+** reps, writing the sales playbook, and getting to **25%** average month-over-month growth in the first three months.
- Built an automated outbound prospecting pipeline (**n8n**, **Apify**, **BigQuery**) that finds companies actively running **Meta** ads and turns them into a ready-to-contact lead list.
- Used the **OpenAI** API to personalize outreach and pushed it out over **WhatsApp** through **MessageBird**.
- Set up the email outbound stack end-to-end, using domains through **GoDaddy**, mailboxes on **Google Workspace**, **Clay** for enrichment (verifying emails, mapping current tech stack, pulling ad context and on-site forms), and **Instantly** for sequencing; closed at **0.78%**.
- Set up a referral program (**GrowSurf**, **MessageBird**, **Sender.net**) that added **8%** average **MoM** growth through the referral channel over its first year.
- Put together monthly sales reports for the CEO covering agent-level **KPIs**, conversion rates, and pipeline health, which fed directly into company-wide decisions.
- Merged **WhatsApp**, chat, and email into a single **Freshdesk** view, saving the support team **10+** hours a week they'd been losing to switching between channels.
- Hired and managed the support engineering team and introduced **KPIs** and QA processes for support quality.
- Rolled out onboarding tours in **Viral Loops** so support didn't have to walk every new user through the product by hand.

Growth & Technical Support Lead

June 2023 to April 2025

JaldiTech, UAE-based CRM startup (Remote)

- Built a **BigQuery** data warehouse, cleaning up historical data with **Python** and syncing **Stripe**, CRM, **Facebook**, and **Google** data through **Fivetran** into one source of truth.
- Built out dashboards in **Retool**, **Google Sheets**, and **Grafana** to track **MRR**, **ARR**, churn, **CLTV**, and cohort performance for stakeholders and investors.
- Ran A/B tests on marketing campaigns and **tripled** the **MQL** conversion rate by iterating on creative and messaging.
- Dug into **Mixpanel** usage data to find where users were getting stuck, then worked with engineering to fix it.
- Automated **Stripe** and **Mixpanel** data into **Google Sheets** with **AppScript** (**JavaScript** and **Python**), cutting out hours of manual investor and ops reporting every week.
- Built webhook and **Zapier** integrations that made it easy to pull leads from **Facebook** and webforms straight into Jaldi's CRM.
- Ran **Meta** and **Google Ads** campaigns that, combined with organic growth, grew social following **10x**.

Technical Support Engineer

January 2023 to June 2023

JaldiTech, UAE-based CRM startup (Remote)

- Helped customers connect **Facebook**, webforms, and other lead sources into Jaldi via webhooks (**JavaScript**) and **Zapier**, building multi-step automations and hopping on **AnyDesk** when they needed hands-on help.
- Built and tested **Mailgun** email templates, checking deliverability and rendering with **Postman**.
- Ran product testing, logged bugs on **GitHub**, and used **Postman** to push test data into Jaldi's CRM.
- Jumped on sales calls and product demos when the team needed an extra hand.

Technical Support Engineer

July 2021 to January 2023

KeepTruckin (now Motive), Fleet Management SaaS

- Handled inbound support for software and hardware issues, logging cases in **Salesforce** and following up by phone and email.
- Pulled customer usage data from internal databases and **Grafana** to diagnose issues, raising **Jira** tickets and working with engineering to get them resolved.
- Took on larger enterprise accounts and helped put together client-facing reports.
- Closed **2,000+** cases with around **97% CSAT**.

SKILLS & TOOLS

Analytics & Data: BigQuery, SQL, Retool, Grafana, Mixpanel, Google Sheets, Python (NumPy, Pandas), Fivetran

Automation & Integrations: n8n, Zapier, Apify, OpenAI API, AppScript, Webhooks, JavaScript, Postman, GitHub

Growth & Marketing: A/B Testing, Referral Programs (GrowSurf), Onboarding (Viral Loops), Meta Ads, Google Ads, Cohort Analysis

CRM & Support: Salesforce, Freshdesk, MessageBird, Sender.net, Mailgun, Jira, Hubspot

Payments & Reporting: Stripe, MRR/ARR/Churn/CLTV dashboards

EDUCATION

Bilkent University, Ankara, Turkey

August 2015 to July 2020

BSc Mechanical Engineering, **full tuition and accommodation scholarship**

Aston University, Birmingham, UK

January 2018 to June 2018

Erasmus Exchange Semester: Estimation, Measurement & Scheduling; Advanced Computer Aided Design

FFC Grammar School, MPM, Sindh, Pakistan

June 2011 to August 2015

CAIE O/A Levels: **8 A*s** and **1 A** at **O Levels**; **3 A*s** at **A Levels**

LANGUAGES

English (Professional), Urdu (Native), Punjabi (Native), Turkish (Basic)
